Dedication to Victoriously Overcome Difficult Environments

Increasing Opacity of the Business Environment

Although the world economy during this consolidated interim period has shown signs of recovery from the dire slumps following the simultaneous terror incidents in the U.S. (September 2001), the future is still unclear due to the continuing drop in the U.S. stock market. Although the decline in personal consumption within the Japanese economy has shown indications of bottoming out, there is an increasing bleakness concerning the future including the stock market continuing to tumble to new lows while the deflationary trend grows.

In the electronics industry, there are signs of a recovery for demand in digital appliances and other areas. However, resilience is still lacking in the market that centers on the IT related areas.

Under such circumstances, our consolidated performance for the interim period (April 1, 2002 to September 30, 2002) showed net sales posting a year-on-year decline, both operating income and ordinary profit returning to a profit.

Despite the continuing severe business climate, the SMK Group will establish an organization that will overcome this recession and rapidly respond to the changing market. In addition, we will pursue an administration that will improve performance and realize growth by increasing business efficiency and optimizing management resources.

Business in an Era of Drastic Change

The SMK Group has proactively entered into IT related markets and used IT as a tool to promote efficient management globally. For the time being, we will develop technology associated with broadband that is dominating in the market and with the ubiquitous network environment. We will especially place the greatest priority on producing original, creative and pioneering products as well as seek out new markets where future growth is expected.

In response to the challenges of globalization, we will further expand business opportunities in the Chinese market, with its great potential, by putting an emphasis on production and sales network bases.

As for the heightening of business efficiency, we have separated the posts of chairman and

president in April 2002 and have enhanced corporate governance by introducing a structure with executive and outside directors.

Moreover, we are striving to reinforce our corporate organization to create a company with an ability to achieve continual growth and development even within periods of slumps in demand, as we are currently experiencing. We will streamline production, sales, logistics and other areas. We will also reorganize our business by reviewing the productivity and the trends of medium to long-term markets, and are establishing operational tie-ups on various dimensions. We will also further review the cost structure and reinforce our corporate organization, although some measures have already generated positive effects in this interim period.

Through these efforts, the SMK Group will collectively work to heighten corporate value.

I would like to take this opportunity to ask all the shareholders for your further understanding and continued support.

SMK

(April 1, 2002 to September 30, 2002)

Overview for the Interim Period

Although the world economy during this consolidated interim period has shown signs of recovery from the dire slumps following the simultaneous terror incidents in the U.S. (September 2001), the future is still unclear due to the continuing drop in the U.S. stock market. Although the decline in personal consumption within the Japanese economy has shown signs of bottoming out, there is an increasing bleakness concerning the future including the stock market continuing to tumble to new lows while the deflationary trend grows.

In the electronics industry, there are signs of a recovery for demand in digital appliances and other areas. However, resilience is still lacking in the market that centers on the IT related areas.

Under these conditions, the SMK group has striven to

increase the market, strengthen development of new products and improve cost competitiveness among other measures. However, the consolidated net sales for the interim period decreased by 5.6% year-on-year to 30,229 million yen.

The conditions by market are as follows.

Within **the visual parts market**, a demand for TVs including LCD /PDP and DVD units remained steady, due in part to the World Cup games held in June 2002, although VCRs did poorly. As a result, net sales decreased by 2.1% year-on-year to 8,489 million yen.

Within **the audio parts market**, the slump in luxury type of AV receivers caused net sales to fall by 6.3% year-on-year to 2,418 million yen.

As for **the electronic instrument parts market**, the relatively strong demand for automobile products centering on car navigation systems and the release of new products compensated for the unit price decrease and resulted in a 0.6% increase year-on-year to 2,707 million yen.

Within the electronics toys and home electronics parts market, the impact of the drop in unit price offset the expansion in the sales volume of TV game parts, and home appliance parts sold poorly. Consequently, net sales decreased year-on-year by 14.6% to 2,645 million yen.

Within **the communication parts market**, there were positive factors such as the rapid spread of cellular phones with cameras and the growth in production for some overseas clients. However, the sales level of last year was not reached and net sales decreased by 2.8% to 8,161 million yen.

As for **the information parts market**, solid growth was posted in digital still-cameras and other areas, but demand dropped in the office equipment area. This led to an overall decrease in net sales by 13.8% year-on-year to 5,219 million yen.

As for revenues, despite the loss in exchange arising

from the sharp yen appreciation, operating income totaling 1,019 million yen was posted due to cost-cutting and other rationalization measures.

In addition, despite about 1,700 million yen in extraordinary profit resulting from the return of the agency portion of the welfare pension funds, there were also extraordinary charges such as special retirement allowance payments. Thus, the net interim income posting an amount of 936 million yen.

Outlook for This Fiscal Year

As for future prospects, while Japan's economy continues to exhibit disturbing elements including deflation showing no signs of ending and consumer spending declining under the continuing stock market slump, there is also a greater uncertainty about the global economy due to the slowdown of the U.S. economy resulting from the stock market crash.

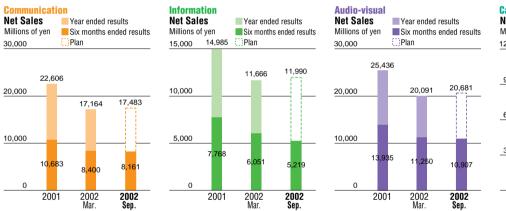

Our electronics industry is showing signs of recovery in demand in the digital home appliance and digital still-camera market. Nevertheless, it is still hard to predict the

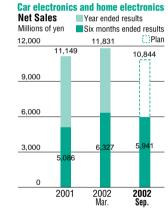

future of the overall market including the cellular phone area.

However, there are also markets with a prospect of growth during the medium and long-term due to the advancement of IT and digitalization, and the development of networks resulting from the propagation of broadband and fiber optics.

SMK will maintain our proactive measures for globalization and IT as our steadfast principle. For these reasons, our company will improve business performance by responding quickly to growth areas and cultivating new markets, developing new products and technologies that correspond to customer needs, upgrading manufacturing technologies, establishing efficient sales systems and reviewing cost structures so that as a company we can continue to post growth in the progressively tougher economic environments. In this manner, we promise to improve our performance by strengthening our coherence as one group.

As for our consolidated business performance for this fiscal year, we anticipate net sales of 61,000 million yen, and net income of 1,520 million yen.

SMK in Market

Thin Condenser Microphone with a Connector

Greatly contributing to making information terminals thinner and smaller

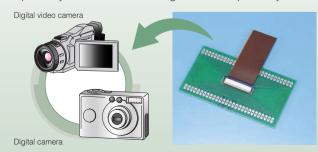

By combining a 1.5mm compact and thin electret condenser microphone (ECM) with our unique newly developed microphone connector, the mounted height is 2mm, the smallest in the industry.

0.3mm Pitch FPC Connector, the EC-03 Series

PCB height of 1.3mm; designed a unique easy flip lock method

By making the contact section a slider structure, which is less susceptible to bending, high contact reliability has been secured. This combined with both a top contact point compatibility being realized and the use of our exclusive easy flip lock system has secured a higher level of operability.

Force-Feedback Type Touch Panel

Produces a "clicking" sensation when inputting on the Touch Panel

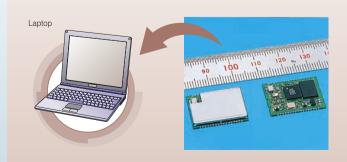

The sense of operation has been improved several levels by providing various touch-like sensations including clicking. This is achieved by implementing our unique technology that vibrates the touch panel and feeding back this reaction to a finger or pen when inputting on the panel.

Bluetooth Module

Short distance wireless communication technology using a 2.4GHz band

Use of Bluetooth is increasing in frequency in the case of cellular phones, laptops, computer equipment, digital household appliances and other equipment. Its use is expected to extend to even more types of equipment from now on.
