

SMK Philippine Plant: Land is acquired for second plant

We are pleased to announce that our Philippine production base, SMK Electronics (Phils.) Corporation, has acquired land for a second plant from the Clark Development Agency .

The current Philippine plant is the SMK Group's main touch panel production base. The acquisition of land for a second plant will help to respond to growing demand for touch panels, particularly for automotive purposes, and prepare for full-scale production of memory card connectors for smartphones and connectors for photovoltaic cell modules.

Adjoining the current plant, the second plant is to start operations from next year. Considering that this new plant has a manufacturing space equivalent to approximately 1.5 times (16,000 m²) the current space, it will now be possible to expand production enabling us to respond to growing demand from 2014.
